Membuka akun	Restore kata sandi trad

2. Pilih menu Client Cabinet API.

3. Tunggu hingga halaman Client Cabinet API terbuka.

# API API activation

InstaForex offers to use a new product – Client Cabinet API.

API is an immense library of functions available to every customer of the company. Thanks to the features of the Client Cabinet API you can embed the main facilities of the Cabinet in any of your resources.

Thus you have a real possibility to control the status of your trading account without necessity to log in the Clent Cabinet at the Company's website.

In order to avail of the service Client Cabinet API you have to enable it at this very page. Set the necessary parameters in the form below, and get the link to the page comprising required documentation.

#### Access level

There are two levels of access to the Client Cabinet API functions. Free access (check the appropriate box to enable it) does not require additional information. Depending on the settings, with limited access, a client can view the account data with the password, or with the password, IP and IP mask.

#### **Client Cabinet API functions**

Using API, customers of InstaForex Company have access to the extended range of Client Cabinet functions. In particular, they can request the information about open and closed trades, account balance, traded lots over a period, bonus statistics, authorization logs, and summary information.
